Homotoxicology

Illness is caused by the body’s reaction to the presence of disruptive homotoxins. What we recognize as the clinical symptoms of illness is what surfaces after the defense system has reacted to the threat.

This means that illness is not the presence of symptoms as such, since these should only be seen as proof of ongoing defense activity.

As long as clinical symptoms are only viewed as a threat to the quality of life of the patient and the entire treatment is geared to the removal of these symptoms, the results will be superficial and we are actually mortgaging the patient’s long- term health.

Homotoxins

Exogenous homotoxins. Externally introduced, environmental exposures

Examples: tobacco, alcohol, drugs

Aromatics, colorants, food additives

Metals: cadmium, evaporation of glues, gasses, radiations

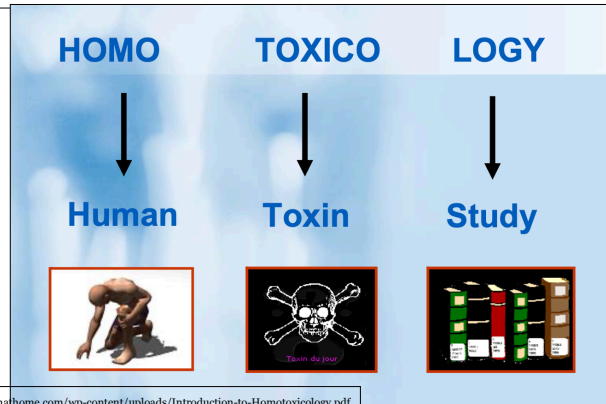

Endogenous homotoxins. Created in the body.

Examples: Intermediate or waste products of metabolic processes (e.g. CO₂).

Imbalance of hormonal secretions (e.g. oestrogen/progesterone)

Inhibited or absent mediator or intermediate substance secretion (e.g. insulin in diabetes, serotonin in depression)

Homotoxicology

<https://wholehealthhome.com/wp-content/uploads/Introduction-to-Homotoxicology.pdf>

Homotoxicology: Dr. HH Reckeweg

"I would like one day to merge homeopathy with mainstream medicine"

H.-H. Reckeweg 1905-1985

Drainage

The body's cleaning and fortifying abilities are naturally maintained by the wheel of emunctories. An emunctory is an organ of elimination, responsible for getting rid of waste.

There are six primary (or physiological) emunctories. These include the liver, kidneys, large intestine, lungs, skin, and vagina.

If the primary routes of elimination are functioning properly, our bodies are fully capable of detoxifying themselves normally. Yet if they are bogged down with toxicity or aren't functioning well, then even our normal cellular waste products can lead to free radical damage, cellular degeneration, and symptoms of disease if not properly excreted.

Drainage

Two courses of emunctories treat and eliminate the stream of toxins along this wheel.

- 1) The first course goes from the skin to the digestive system and then to the respiratory system.
- 2) The second course evolves from the urinary system, then goes to the osteo-articular system and finally to the cardio-vascular system.

Bouko-Levy

Phytotherapy: plant extracts, in mother tincture (M.T.)

Gemmotherapy: bud extracts, in first decimal (IX)

Organotherapeutic remedies: healthy organ extracts or organ secretions prepared according to the general rules of homeopathic remedies.

“...used for prolonged courses of treatment, usually for a minimum of 2 months each

It is important to alternate the different plants according to the rhythm of seasons vascular plants should be given in the Summer and rheumatic plants in the Winter, liver detoxifying plants in the Spring and kidney detoxifying plants in the Fall.”

Bouko-Levy

Plant medicines

Action on organs

Removal of toxins

As regards Homoeopathic **phytotherapy**, it is necessary to say here simply that it is the question of **elective action on the tissue or organ which is ill, (whose) perturbed function checks the elimination of noxious substances**, produced or introduced in the organism.

Leon Vannier (1880 - 1963)

- Fully indexed and searchable
- Extract remedies
- Combine remedies with word searches
- Cross symptoms

“The Earthwise Herbal Repertory is the first work of its kind, offering an extensive index of herbal uses, indications, organ affinities, energetics, and constitutional typology. Here it is packaged together with The Earthwise Herbal, v. 1-2, to provide a comprehensive guide for herbal practice. The approach is similar enough for homeopathic use as well.”

Matthew Wood

24

The Earthwise Herbal is organized around the concept that each plant has an innate intelligence or core “essence” as the ancients would have said, binding together the disparate properties and uses into a meaningful and logical or intuitive whole. The compounds in the plant, its appearance, growth habit, ecological niche, and medicinal properties are united by this common personality, intelligence, or essence.... This approach is thus set upon a holistic foundation.

25

The entity or personality of a disease is not identical to the disease organism, because the latter manifests different expressions of disease in different people. In holistic medicine we attempt to comprehend the whole expression or “constitution” of the sickness in the individual. Only when our understanding encompasses the whole are we in a position to eliminate the disturbance radically (from its root) through lifestyle changes, diet, and **medication**. And these must be suited to the individual.

26

The plants discussed are mostly those found in traditional literature or adopted recently into modern herbal practice.

In ancient times single herbs were known as “simples” in contrast to combinations, or “compounds”.

This herbal follows the approach of the simples, not only in their use of individual herbs, but in their methods for determining the properties of herbs.

Materia Medica

Aesculus hippocastanum

aesc. Horse Chestnut. White Chestnut. Agastache hippocastanum.

Horse chestnut is a medium sized tree native to Western Asia but naturalized in Europe and now in the western hemisphere, where it has several cousins such as Ohio buckeye (Aesculus glabra). The nuts are mildly toxic but have long been used in folk medicine for the treatment of hemorrhoids and varicose veins. They also make an excellent liniment for muscle spasms in horses, hence the name "horse chestnut." It is not related to the true chestnut (Castanea) but is in the Sapindaceae family. Much work has been done with the horse chestnut in nineteenth-century botanical medicine, twentieth-century pharmacology, and homeopathy. Dr. Bach, of flower essence fame, used it under the name white chestnut. It contains flavonoids, tannins, fatty acids, sterols, triterpene saponin glycosides (3-6%) in a complex called "aescin," and coumarins.

Aesculus is most famous as a specific for hemorrhoids. "Two or three drops, with a spoonful of water, taken before meals and at bedtime, will cure almost any simple case of piles in a week," writes Dr. W. T. Fernie (1914, 97), a reputable author, of the tincture. If we understand the processes behind the formation of hemorrhoids, we can grasp many additional functions to which horse chestnut is remedial.

Materia Medica - Aesculus hippocastanum

Preparation and dosage

Internal use: homeopathic or flower essence. Tincture: 5-15 drops (Fyfe), 20 drops adult dose, twice a day (de Vries). Long-term use advisable (John Scudder, Jan de Vries). External use: salve, ointment, cream.

Cautions

Cautions for those on blood thinning drugs. Not to be used internally in large doses.

Literature

Traditional, Edward Bach (2), J. Compton Burnett, Matthew Wood (2-confirmed, 4, 9, 12), William Boericke (1), John Scudder (1, 3, 5, 6, 8, 11, 14), John William Fyfe (7), David Winston (13), modern research (10).

Because homeopathic symptoms are physiologically meaningless we get indications like the following (Phatak, 1977, 469):

Violent vomiting; with retching; desires death, to relieve vomiting; every few minutes. Hunger soon after eating. Easy vomiting, without nausea.

Would anybody guess that these symptoms are specific to *Phytolacca*? Why yes, I suppose someone might say that, someone who had actually eaten uncooked poke root! However, anyone else would not particularly associate the above with this plant. These symptoms are associated with severe irritation of the mucosa from the actual impression of poke root and are not typical of the acute and chronic conditions for which this plant is usually used. By comparison, the following indications from John William Fyfe (1909, 657) describe a general physiological state:

Enlargement, inflammation or pain in glands; mucous surface of the fauces full and of dark color, the tonsils swollen, throat dry or covered with patches of tenacious secretions; fatty degeneration of the heart.

33

(Phatak's MM) was an upgrade... of Boger's amazing Synoptic Key, where the Locations/Organ Affinities were spelled out with greater clarity than anywhere before or since in homeopathic literature and contained many more essential clinically verified symptoms and remedies, they were sadly reduced to a line or two of undifferentiated text in Phatak

Both Phatak and Boger's MM and Repertory are discussed in the *Earthwise Herbal Repertory* as excellent examples for the most part of non-Kentian Traditional (as opposed to "classical" Kentian, and neo-Kentian Homeopathy which was until the 90's ALL that was taught in most schools of homeopathy).

Repertory of Homeopathy and Homotoxicology

Ivo Bianchi

Born in Verona (Italy). Graduated in Medicine and Surgery at Padova University in 1973

36

Repertory of Homeopathy and Homotoxicology

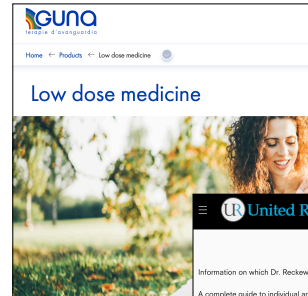

Ivo Bianchi

It divides the repertory into chapters of physiological importance that follow a system elected by Bianchi, related to his view on homotoxicology.

It allows the busy homeopath to search for many pathological conditions and find remedy suggestions within the focused clinical rubrics of this repertory.

RAMSEYER A. A., Universal and Organ Remedies (rsy1) ★

Bonus!!!

RAMSEYER A. A.

Introduction to rademacher's organ remedies

In 1841 appeared in Berlin the first edition of a work which made no little stir in medical circles; in the short space of five years it reached its fourth edition. Its German title ★ is rather lengthy, but it is generally quoted in short as Rademacher's *Erfahrungsheillehre*, which we may call the empiric medical practice, not of Rademacher alone, but of the old alchemistic physicians, particularly that of Paracelsus. Having practised that system during 25 years, Rademacher thought it his duty to communicate to the medical world what he knew about it. But in saying system, the reader must not think of this word in the sense of a theory, for, in his preface, the author warns us that he did not pick a so-called theory out of Hohenheim's (Paracelsus) writings, because he held the opinion that there were already too many theories; his (Rademacher's) idea was merely to give some plain, rational advice how to make sick people well, not to set up a theory.
